

PRIME BYTES

Customer Frequency & Payment Preference Analysis

An executive review of 29 trading days (3–31 May 2026) across cash, card, and mobile payments

Kevin Monama | Data Analyst

Prime Bytes Lab Club House | Soshanguve BB, South Africa

EXECUTIVE SUMMARY

Cash spends the most per visit; card drives the most footfall

KEY TAKEAWAYS

- Cash generated the highest revenue (R25,792) with the fewest transactions — average spend of R58 per customer, the highest of the three methods.
- Card processed the most transactions (502) but the lowest revenue per customer (R42) — it is the default for smaller, faster purchases.
- Mobile is the strongest weekend performer, earning 45% of its monthly revenue on Saturdays and Sundays alone, versus 7% for card.
- Daily performance swings widely — from R887 (18 May) to R4,928 (13 May) — pointing to inconsistent staffing or promotion cadence.

Cash leads on revenue; card leads on transaction volume

REVENUE PER CUSTOMER (BASKET VALUE)

R58.22

Cash

R49.95

Mobile

R42.18

Card

Mobile payment usage nearly doubles its weekend share versus card

SHARE OF REVENUE EARNED ON WEEKENDS

45%
Mobile payments

34%
Cash payments

7%
Card payments

Revenue swings 5.5x between the slowest and busiest trading day

PEAK DAY

13 May — R4,928 (cash, 61 customers)

SLOWEST DAY

18 May — R887 (cash, 24 customers)

RECOMMENDATIONS

Three moves to convert insight into revenue

01

Protect cash-handling on weekdays

Cash drives the highest spend per visit and is 66% weekday-earned — keep sufficient float and a dedicated till on Mon–Fri to avoid turning away high-value cash customers.

02

Keep card infrastructure always-on

Card processes the most transactions of any method (502) — prioritise machine uptime and backup connectivity, since downtime here hits the most customers, most often.

03

Push mobile promotions on weekends

Mobile already earns 45% of its revenue on weekends — a weekend mobile-payment discount or loyalty prompt would compound an existing behaviour rather than create a new one.
